

Transferring intuitive visual instructions to real situations

KDDI Vist@Finder

Stability

Reliable real-time streaming

Our unique technology convey stable streaming video without having trouble.

Visually

Apply your visual instruction to use in real-time practice

Design the best augmented reality experience which contributes to the reduction of human errors.

Security

Delivering secure online data transmission

Using Kcipher-2 encryption technology which processing ability is 10x faster than the US standard encryption AES.

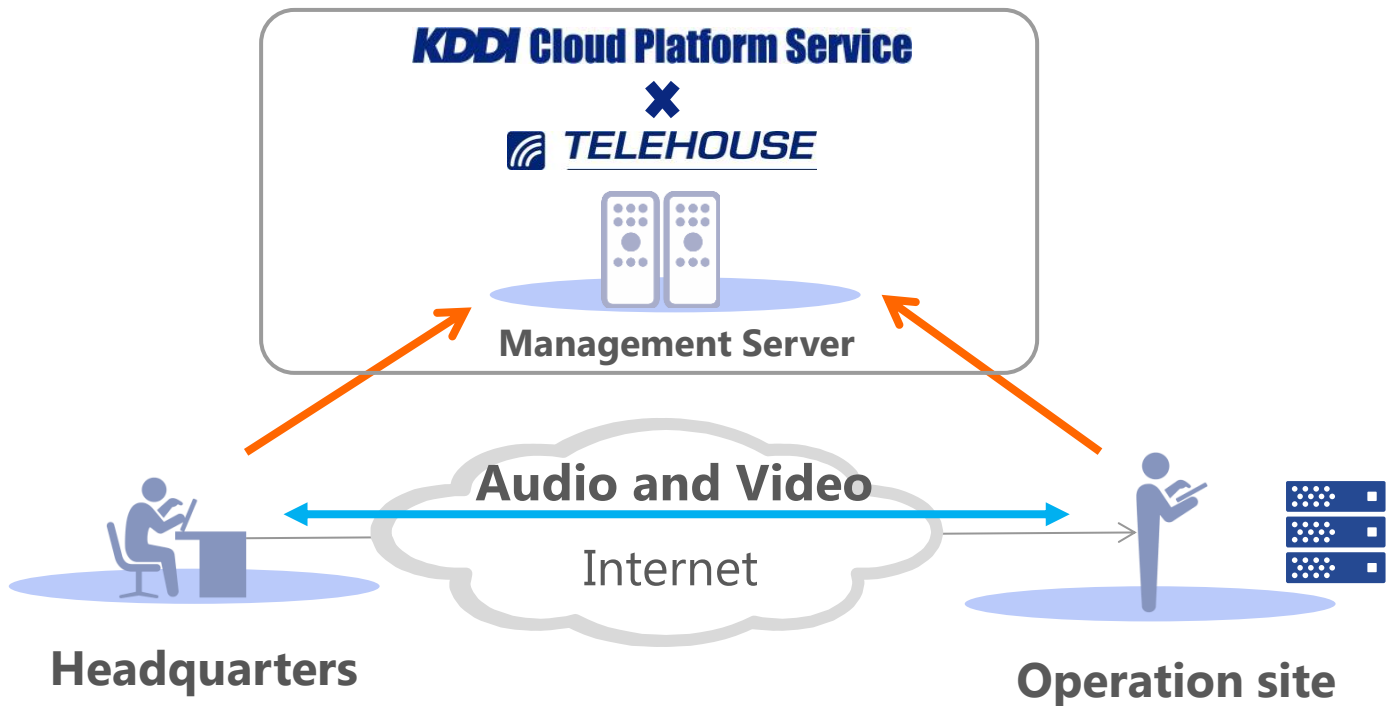

Real time visual instructions delivered to operation site

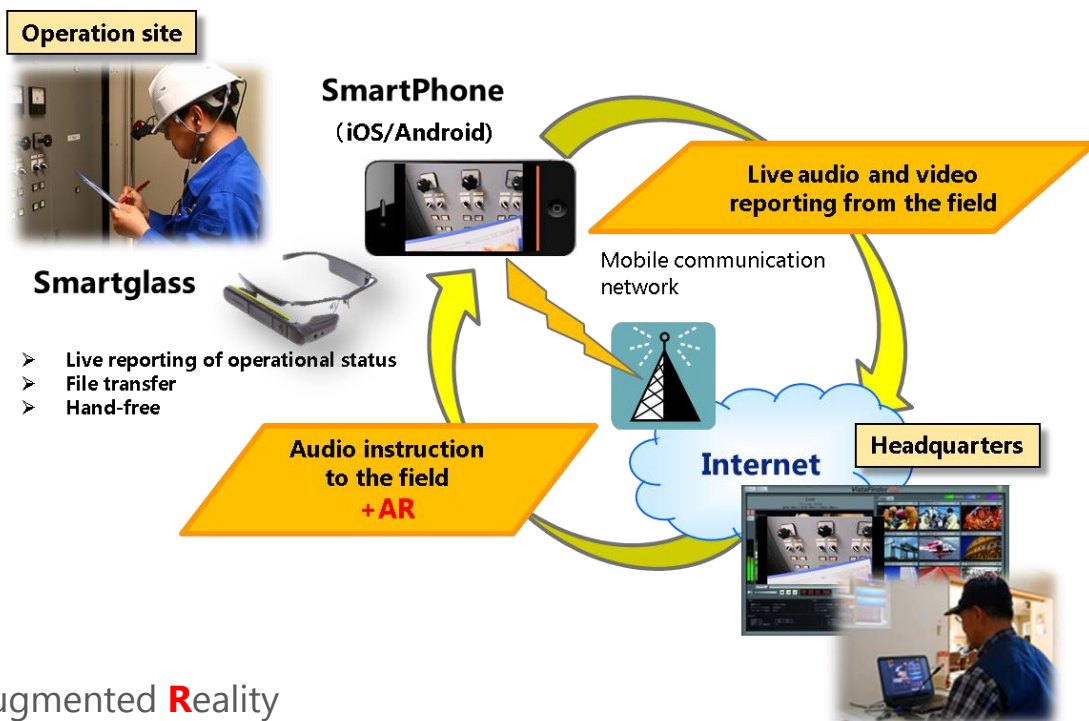

KDDI Vist@Finder

Design comprehensive instruction with high quality real time streaming!

What is KDDI Vist@Finder?

AR: Augmented Reality

- > Real-time instruction
- > Video and Phone recording

KDDI Vist@Finder is a remote operations supporting system that allows videos taken by smartphones, tablets, mobile PCs and other devices to relay remotely from the field over various types of networks, simply, securely, and in high quality. The system provides a variety of functions, including operational instruction and confirmation through live audio and video, recording of on-site video, hands-free type transmission utilizing wearable cameras, intuitive instruction by AR technology
